

## Impex Alliance Trading Inc

IAT was established in 2016 by Ideyi Chuku and Tim MacKinnon who combined their 20 years of experience as trade facilitators into a single operation focusing on trade facilitation and mining.

In early 2016 we began the acquisition of various mining operations in Africa including Iron, Copper, Zinc, Lead and Potash. Operations are expanding and in 2017 we began mining of Borate. Recent aerial magnetic scans have revealed over 54- million metric tonnes of high-grade lead ore alone.

With our resources we can be a buyer-reseller when needed but our focus is to facilitate trade between Buyers and Sellers. Buyers approach us based on our strong relationships with Sellers and Sellers know that we are cautious with what we present.

## What We Do

**Trade Facilitation:** Our job is straightforward, we introduce Buyers and Sellers. In that job we endeavour to reduce the risk to both sides by ensuring that the Seller is capable and reliable and the Buyer is ready, willing and able. With a dedicated compliance department we perform the first tier of due diligence resulting in a higher than industry standard rate of successful closings once the LOI is issued.

With world-wide connections and refined negotiation skills we find solutions for both Buyers and for Sellers.

**Mining:** We mine various ores and other resources, then warehouse them and ready products to client's packaging specifications and finally, based on client's needs we can arrange logistics assuring a streamlined process from ground to delivery onto ships.

## How We Do It

The IAT Team reaches global clients, Sellers and Buyers. Treating fellow facilitators as important and integral pieces of the projects brings everyone behind the objective creating a drive and indeed a passion to achieve results for our clients. While we mine Copper, Iron, Zinc, Potash, Lead and Borate and more resources, we are well integrated with the important traders and Sellers in the crude and fuel sectors around the globe. With a dedicated DD and Compliance department and secure IT our clients benefit from streamlined offers without all the wasted time and effort.

- In Africa we mine Iron, Copper, Zinc, Lead and Potash. Operations are expanding and in 2017 we began mining of Barite. Recent aerial-magnetic scans have revealed over 54 million metric tonnes of high-grade lead ore alone!
- Mining requires extensive studies, planning, intensive labour and heavy equipment. Impex Alliance Trading Inc has already put in place the investments and the planning that is resulting in remarkable production in addition to content and well-rewarded employees.
- In Africa one must have political acceptance of the operations in order to maintain continuous operations. Working with the permission and 'blessing' of the various villages in addition to the municipal, provincial and national governments to improve living conditions, improve wages, and where required roadways, and to be a benefit overall are all critical components of the formula for successful mining operations in Africa. With two generations of influence we are able to assure Buyers of consistent and reliable supply.
